

10 ways Burkeans differ from Anti-Burkeans

Burkeans

Anti-Burkeans

1. Private Property

Value Private Property

Devalue Private Property

See [eCon 103 – Economic Systems on the Control Axis](#) to visualize this.

2. Controlling Environment

Favor Markets

Favor government

Neither is entirely wrong, though Burkeans are more right.

3. Economic Control

Prefer the invisible hand

Depend on visible control

Anti-Burkeans have a fear of flying. Burkeans don't fear the invisible.

4. Economic Worldview

Desire opportunity,
as unfettered as possible

Look for economic evil,
find it, get mad

Burkeans complain of being held back. Anti-Burkeans complain of being held down.

5. Humanity Worldview

See individuals,
operating inside societal structures.

See classes,
full of victims & oppressors.

Burkeans see people in their full, organic humanity. Anti-Burkeans see profiles and personas.

6. Pie Perception

Growing Pie

Fixed Pie

Anti-Burkeans think there's a fixed amount of money in the world, locked up.
Burkeans know the pie has doubled countless times, and will do so again.

7. Pie Fight

Demand freedom to grow

Fight over slice sizing

If the pie never grows, then the most important thing is to divvy it up & get yours.
A growing pie boosts the commonwealth & creates personal wealth opportunities.

8. Present Outlook

Best time to be alive

We're doomed

Anti-Burkeans live under a cloud of doom, sick with worry about the climate, wealth gaps, GMOs, & certain wars, ad absurdum.
Burkeans recognize that America's Burkean values led the world into a centuries-long growth of freedom and prosperity.

9. Control Preference

Decentralized Control – dCon

Centralized Control – cCon

Moderate dCon is best. It yields #More4More. Burkeans rest power with individuals, consistent with the natural and God-given rights guaranteed to Americans in our founding documents.
cCons mask their true nature behind the very successful *Progressives* brand, popularized by media stars everywhere.
They favor Centralized Control, an organizing structure abhorred in virtually every progressive realm.

10. Peak Perspective

Scarcity is price bound.

We've peaked.

Raise the price and ingenuity follows,
after which breakthroughs make
the impossible possible, and then affordable.

– or that our natural resources have peaked.
